On position

Trainee/Intern C#/.Net developer

Objective (preferences for)

Software for Healthcare (desktop & mobile) – *or* –
RTS Games (like Cossacks, AoE III)

Technologies stack

C# / .NET, .NET Core, XUnit, Git – basic knowledge, within current
 formation course;
SQL, MySQL – within formation courses and have some support
 experience as device service engineer;
Web (HTML, CSS, JavaScript) – within formation course, have some
 experience in sites development and filling.

Experience in development

commercial development – 2 months,
 currently work as intern for ERP product start-up.;
understand OOP, SOLID, DRY principles, automated tests;
have experience in localization of medical devices and software.

Common experience

>11 years in sales, 3 years as product manager, >3 years as service
 engineer.
Mostly for local representatives (e.g. Alcon, Carl Zeiss) or distributors of
 medical equipment.

Formations

higher education: (2003) Kharkiv National University of Radio
 Electronics; Physical and Biomedical Electronics.
web: (2015/16) IT Step, Kharkiv, "Modern WEB-technologies".
C#/.NET: (2020 – now) Foxminded, courses "C# Start" and currently
 "C#/.NET development mentoring".

CV

On position

Trainee/Intern C#/.NET developer

I'm typical "switcher".

I was graduated as an electrical engineer in medical electronics.
I worked as a service engineer, a sales representative and a product
manager. Mostly I worked for local representatives or distributors
of medical equipment. My responsibilities were customer and
equipment service, support and maintenance, product
management and marketing.
Now I've decided to switch to programming. Because over the time I
was more interested in working with computers and programs
rather than with electronics and devices themselves.

My formations

IT Step, Kharkiv, "Modern WEB-technologies". However, I wasn't
satisfied with the gained knowledge and had studied better by
myself.
Currently I'm taking the course "C#/.Net development" at Foxminded.
And after getting position I'll complete this course yet.

Expectations from new vacancy

I'd like to develop application and embedded software (mostly for
healthcare sector) or RTS games (like Cossacks, AoE III etc.).
Therefore I'm open minded to start at a lower salary (400-450$), but
getting a position in the company that meets my objectives.
And in this way to gain experience in C#/.NET faster.
After some period I'd like to relocate to Czech or Germany.
